Local Area and Charity Initiative

Donating Money From Your Recycled Toners

Would you like to join us?

CSR's Money-Back Recycling Initiative in partnership with local charities

As our initiative to help our local environment, CSR Digital provide a Money Back Recycling Service, money back for your empty Olivetti and Develop toners.

Simply choose one of our local charities and they will receive a donation when your Develop and Olivetti toners are recycled.

CSR Digital prides itself on providing fair and competitive pricing for both hardware and software. CSR Digital uses system monitoring facilities that detect problems before they have any impact on the business and its printing.

Supporting Homeless People in Milton Keynes
The Bus Shelter MK. A homeless shelter on wheels to reduce rough sleeping in Milton Keynes, providing safe, warm nights for people forced to sleep on the streets.

Supporting Young People in the Community
Ride High transforms the lives of disadvantaged children by giving them the opportunity to learn to ride and look after horses and ponies.

Supporting the Young
Young carers are 8-19 year olds who are caring for a family member with a physical or mental illness, disability, or because of a drug or alcohol related problem.

How CSR Works with Customers to Build Long-Term Relationships

CMI – Chartered Management Institute

The Brief
Serverless Print Roaming, Google Cloud Print,
Multi-site Printing and Scanning.

The Issues
The customer wanted to introduce Google Cloud Print as the office migrated to Chromebooks and Google Office. The customer also required a multi-site solution for a fleet of Olivetti MFP's in Corby and London, staff also travelled between both sites on a regular basis.

The Solution
Ysoft SafeQ6 was a great fit, featuring Print Roaming, Google Cloud Print, Encrypted Printing and Scanning across multiple sites. Ysoft enabled the IT to roll out the migration slowly and with very little distribution to its 250 staff. Using Ysoft the customer has been able to meet their GDPR compliance requirements and helped to reduce their printer output & wastage.

Bluebird Care – Luton

The Brief
Process unorganised paper patient records, Create File Structure, OCR,
Rename and Organise scans to Local and Cloud Storage.

The Issues
The customer was keeping the patient care records in a secure room in the office. The secure room was nearing capacity and they wanted to digitise previous and newly created patient records.
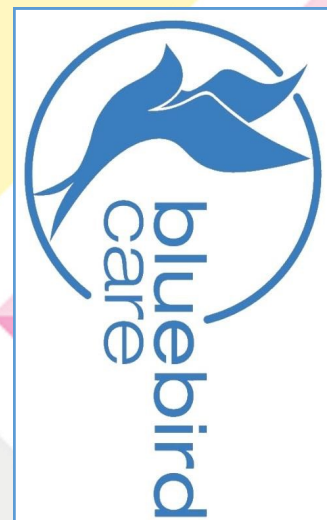

The customer had been using their Olivetti MFP to scan documents,
renaming them, then creating a folder structure based on the customer's name and date of birth. This was a very time-consuming process.

The Solution
We introduced Scanshare to Bluebird Care which was able to read the
Patient Name, DOB and Date of Visit.
Using this information Scanshare created a folder automatically for the customer and sub folders so paperwork could be stored in year and quarters.

Scanshare

SCANSHARE KEY FEATURES

Batch Scanning
Batch scanning is the process of scanning multiple documents, usually a large amount, in one simple process. Batch scanning will process multiple pages and then separate them back out into their respective documents, determined via page number, page count, barcode reading, or another variable method.

POWERFUL DOCUMENT ENGINE
Scanshare allows you to output to many formats in many languages, including searchable PDF, PDF/A, TIFF, Microsoft® Word, Microsoft® Excel and JPEG as standard..

SMART EXTRACTION
Scanshare provides automatic barcode and QR code recognition and document zone analysis drives business
processes directly from the data stored in your files and emails

CONNECT TO A HOST OF SYSTEMS
Scanshare is the bridge which enables the delivery of your data via email, to a file server, or your favourite cloud storage provider; integrate directly to popular DMS, ERP and CMS applications, or you can create your own connector with Scanshare's SDK framework.

DYNAMIC ROUTING
Scanshare recognises workflow triggers such as email, text or script and also makes routing decisions on the fly using metadata or document contents to determine the destination. Examples of this include invoice processing based on a value or the name of a customer. It is also possible to select different output formats.

FLEXIBLE OPTICAL RECOGNITION PROCESSING
Scanshare can read an area of the document to extract the data which can be used to rename the file, select a location or email address or update a database, known as Zone OCR. It can also read an area of the document to analyse the areas which have been marked - useful for exam papers or for checking documents for signatures during the completion of forms. This is known as OMR or Optical Marks Recognition.

INTEGRATES WITH CLOUD STORAGE
Scanshare will upload and work with your current cloud storage to save space and time.

# Scanshare

Scanning   Storage   Workflow   Services

SUMMARY - TECHNICAL POINTS

- Scanshare recognises a Barcode recognition is not dependent on the Barcode's location. It can be sited anywhere.
- Scanshare enables multiple output connectors for the same workflow by connecting to 22 cloud platforms, including SharePoint, DropBox and Amazon.
- Scanshare provides a simple Licensing structure.
- Barcode Reading is available as standard with the option for Barcode creation with the relevant license.
- It does need plenty of space on the HDD (SSD is recommended) which have a fast speed than standard.
- Scanshare can process images containing borders, hole punch and line marks and detects blank pages.
- Users are able to input Meta Data when scanning from an MFP or from the PC Client, making processing of documents accurate and fast.
- Scanshare offers a web based interface, allowing multiple platform access from Mac, PC, and Linux.
- ABBYY Fine Reader requires a license. However, it is unmatched on OCR accuracy and can be licensed on a pages per month basis.
- There is minimal user interaction required once a workflow has been setup.
